

COMMON SPRING MUSHROOMS

The following list, based on LIMC and personal records, is made up of the mushrooms most frequently encountered in our area during the early spring months. Some appear only at this time, while others may fruit throughout the year. Those which usually appear later in the year, or overwinter, are marked with an asterisk. At times, unusual weather patterns may “fool” species into making an exceptionally early or late appearance. Global warming has been documented as being associated with increasingly early appearance of many plant species, and documentation for fungi has recently been demonstrated for Britain.

<i>Agaricus arvensis</i> *	<i>Gyromitra esculenta</i>	<i>Pholiota veris</i>
<i>Agrocybe acericola</i>	<i>Laccaria laccata</i>	<i>Pleurotus ostreatus</i>
<i>Agrocybe dura</i>	<i>Laetiporus sulphureus</i>	<i>Pleurotus populinus</i>
<i>Agrocybe pediades</i>	<i>Leccinum aurantiacum</i> *	<i>Pluteus cervinus</i>
<i>Agrocybe praecox</i>	<i>Lentinus strigosus</i>	<i>Polyporus elegans</i>
<i>Amanita muscaria</i> v/ <i>formosa</i> *	<i>Lentinus torulosus</i>	<i>Polyporus squamosus</i>
<i>Armillaria tabescens</i>	<i>Lycogala epidendrum</i>	<i>Porodiscus pendulus</i> *
<i>Chlorociboria aeruginescens</i>	<i>Marasmius cohaerens</i>	<i>Psathyrella condolleana</i>
<i>Clavicornia pyxidata</i>	<i>Marasmius oreades</i>	<i>Psathyrella velutina</i>
<i>Clitocybe trullaeformis</i>	<i>Marasmius scordonius</i>	<i>Psilocybe cyanescens</i>
<i>Collybia dryophila</i>	<i>Megacollihya platyphylla</i>	<i>Psilocybe montana</i>
<i>Conocybe tenera</i>	<i>Melanoleuca melaleuca</i>	<i>Pycnoporus cinnabarinus</i>
<i>Coprinus atramentarius</i>	<i>Morchella elata</i>	<i>Russula primavera</i>
<i>Coprinus disseminatus</i>	<i>Morchella esculenta</i>	<i>Schizophyllum commune</i>
<i>Coprinus micaceus</i>	<i>Morchella semilibra</i>	<i>Stereum complicatum</i> *
<i>Coprinus plicatilis</i>	<i>Mycena galericulata</i>	<i>Stropharia rogusoannulata</i>
<i>Entoloma strictius</i>	<i>Mycena hematopus</i>	<i>Stropharia semiglobata</i>
<i>Entoloma verna</i>	<i>Mycena inclinata</i>	<i>Tremella mesenterica</i>
<i>Exidea glandulosa</i>	<i>Paneolus foenisecii</i>	<i>Trichaptum bififormis</i>
<i>Galerina autumnalis</i>	<i>Paneolus semiovatus</i>	<i>Tricholomopsis rutilans</i>
<i>Gymnosporangium juniperi-</i> <i>virginiana</i>	<i>Peziza badia</i>	<i>Volvariella speciosa</i>
<i>Hebeloma crustuliniforme</i>	<i>Peziza badio-confusa</i>	<i>Xeromphalina campenella</i>
<i>Inocybe lacera</i>	<i>Peziza repanda</i>	<i>Xylobolus frustulatus</i>
<i>Irpex lacteus</i> *	<i>Peziza succosa</i>	
<i>Ganoderma lucidum</i> *	<i>Peziza vesiculosa</i>	
	<i>Phlebia radiata</i> *
